

Amy

My name is Amy. I live in a small town of 135 people in rural South Dakota called Isabel, and I'm currently pursuing a bachelor's degree in electrical engineering and a minor in astronomy at Arizona State University Online. I chose this degree not only because of my love for science, technology, engineering, and mathematics (STEM), but also for my love of both terrestrial electronics and space technology. When I was younger, I was fascinated with radio broadcasts and large antennae. I used to wonder how it worked without us being able to see it. I then took an electronics and electricity class, and the class made my love for the subject larger than the universe. When it came to space and space technology, it was a love that would never end, as I've always had a fascination with astronomy ever since I can remember.
